

IMDB Movie Analysis

[Hyperlink of my excel sheet](#)

Project Description:

- ▶ The dataset provided is related to IMDB Movies. A potential problem to investigate could be: "What factors influence the success of a movie on IMDB?" Here, success can be defined by high IMDB ratings.
- ▶ The impact of this problem is significant for movie producers, directors, and investors who want to understand what makes a movie successful to make informed decisions in their future projects.
- ▶ Our task is to create a report that tells a story with your data. This should include initial problem, findings, and the insights I've gained. Use visualizations to help tell the story and make findings more understandable.

Tech-Stack Used:

- ▶ I've used Microsoft Power point version 2309 to create this presentation.
- ▶ I've used Microsoft Excel version 2309 to implement the task assigned.
- ▶ I chose Microsoft Excel because it is the most convenient spreadsheet and can be used efficiently to view statistics and analyze the data set given very quickly.

INSIGHTS

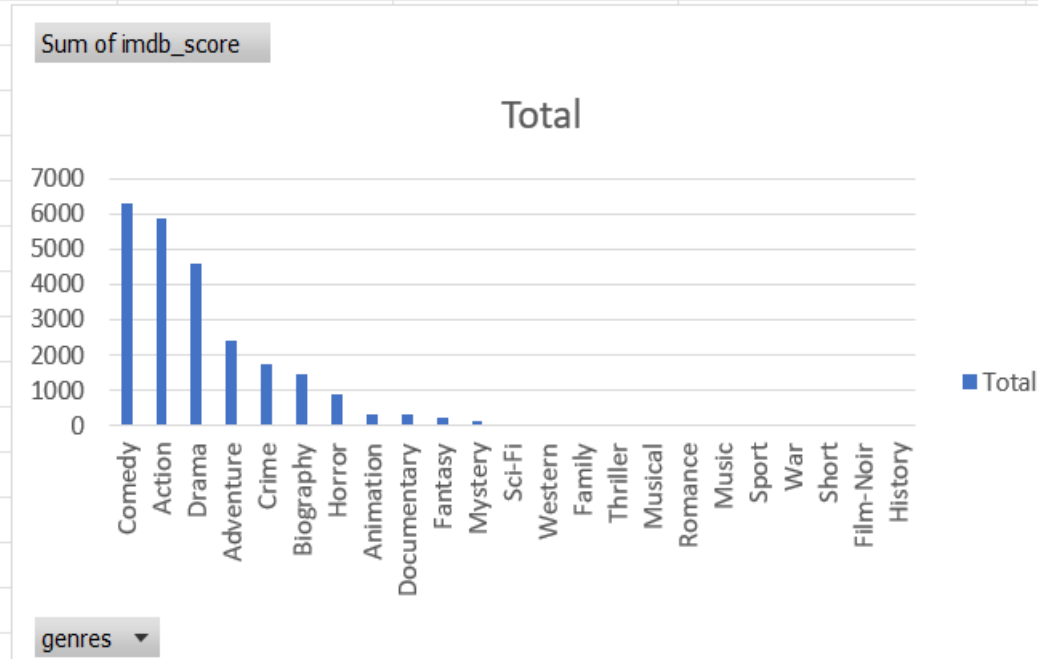

Task A: Movie Genre Analysis

- ▶ **Description:** Determine the most common genres of movies in the dataset. Then, for each genre, calculate descriptive statistics (mean, median, mode, range, variance, standard deviation) of the IMDB scores.
- ▶ I've used pivot table to count the genres and then some statistical functions provided by excel to calculate the descriptive statistics.
- ▶ I've also used bar chart to show the relation between genres and their imdb scores.
- ▶ Excel Images are inserted in next slide.

Task B:Movie Duration Analysis

- ▶ **Description :** Analyze the distribution of movie durations and identify the relationship between movie duration and IMDB score.
- ▶ To determine the relationship between movie durations and imdb score I've used multiple statistical functions like mean , median and standard deviation.
- ▶ I've created a scatter plot to visualize the relationship between movie duration and imdb score.
- ▶ Also added a trendline which direct the strength of this relationship.
- ▶ Image of the excel sheet is provided in next slide.

Task E: Budget Analysis

- ▶ **Description:** Analyze the correlation between movie budgets and gross earnings, and identify the movies with the highest profit margin.
- ▶ I've used CORREL function given in excel to calculate the correlation between budget and gross earnings.
- ▶ I've also calculated profit of all the movies by subtracting the gross earning with budgets .
- ▶ The movie with the highest profit is AVATAR.
- ▶ The data is sorted in descending order on the basis of profit margin.

Results:

- ▶ This project has many conclusion drawn out of it like profits, most common language movies viewed all over world, impact of director on the imdb score of movie, stats about the genres etc.
- ▶ This project made me experience a real time data analysis of a thousand of movie and filter them on the basis of their properties which will be further used by the marketing team to push them to the audience.
